

Cars can always do more. They get better, more versatile, and safer. With our innovative, high quality plastic systems for the engine compartment, exterior, and interior, Montaplast is making its own valuable contribution to progress.

Cars can always do more. They get better, more versatile, and safer. With our innovative, high quality plastic systems for the engine compartment, exterior, and interior, Montaplast is making its own valuable contribution to progress.

At Montaplast we understand "plastic" in its original artistic sense too. We apply our creativity to ensure that today's finest automobiles meet our customers' increasing demands for safety, stability, durability, environmental compatibility, design, and comfort. The fact that tomorrow's car can do so much more than yesterday's without becoming heavier or more unstable due to new components has a lot to do with Montaplast. We work to ensure that metal parts are replaced wherever possible by modern plastics that integrate the maximum number of functions. With the help of the very latest processing and material technologies we develop temperature and pressure-resistant modules that are optimized for function, cost, and weight - destined for the vehicles of the future, today.

This proactive approach characterizes Montaplast today. Our high-quality plastic parts comprise the heart of all systems "Made by Montaplast" just as before.
