

Patented for power: The engine compartment

Montaplast has rightly made a name for itself with oil pans, engine covers, air induction systems, resonators, and cam covers of the highest quality. When you hear "Montaplast" you might well think first of a very special product, the air intake manifold. The reason is that many of the numerous patents that Montaplast owns are related to the intake manifold. Because of our breakthroughs in plastics technology, modern intake manifolds stand up to higher heat and pressure despite smaller volumes and weight, fulfilling more and more functions.
